Kingswood College has partnered with students at SMPN#2 Melaya, a junior high-school located in West Bali on a joint mission to reduce single use plastics in Australia and Indonesia. Through the Bottle for Botol program, students in Bali will participate in an education program teaching them about the impacts of single use plastics on their health and the environment. Upon completion of this program, they will each receive a stainless steel water bottle allowing us to replace the 240ml, single use aqua-cup with water dispensers that they can refill from their canteen. This system will reduce both the economic and environmental costs associated with obtaining clean drinking water at school.

Students in Australia and Indonesia have been working hard over the last few months preparing the bottles for sale. The first stage involved a design competition between students in both countries; the winning design was drawn by Maddie King from Kingswood College and has been printed on all our bottles. In the second aspect of the program, all students wrote a “Symbol of Friendship” these are short messages in either Indonesian or English that are laminated and attached to every bottle sold in Australia and donated in Indonesia. This is one of our favourite parts of the program as it challenges students to communicate in a different language and personalises every bottle.

The final aspect of the program is upon us. It is now time to sell the water bottles in Australia. For every bottle sold, one will be donated to a student in Bali to help them reduce their plastic footprint. Don’t miss out on the opportunity to support this great cause.

- 500ml
- BPA Free
- Stainless Steel
- One bottle buys an identical bottle for a student in Indonesia.
